

Part B Question 3

Algorithm:- Take input number of students and create a loop for inputting marks of every student. An inner loop is also created for marks. Calculating sum and average and outputting the results based on average. If any subject marks will below 33 output the message

PAC :-

Given Data	Process	Required Results
- No. of students - marks	- Check every subject marks should be above 33 - calculating sum and average - checking average	Result statements

IPO Chart :-

Inputs	Process	Outputs
- N - marks	- Checks that marks ≥ 33 - Calculate sum and average - Checking Average	Results

Flowchart :-

Pseudocode :-

INPUT N

WHILE N > 0 DO

Sum ← 0, Avg ← 0, ~~Pass~~ Pass ← TRUE

FOR i ← 1 to 5

INPUT marks

Sum ← Sum + marks

~~NEXT~~ IF marks < 33 THEN

Pass ← FALSE

END IF

NEXT

~~IF Pass = TRUE THEN~~

Avg ← Sum / 5

IF Pass = TRUE THEN

IF Avg ≥ 80 THEN

OUTPUT "Distinction"

ELSE IF Avg ≥ 60 THEN

OUTPUT "Pass"

ELSE

OUTPUT "Fail"

END IF

ELSE

OUTPUT "Sub Fail - Subject Deficiency"

END IF

N ← N - 1

END WHILE
