

Part A Question 4

Algorithm:- Take two variables and initialise them with 1 and start nested loops. Check if the number is not divisible by 3 and print its table.

~~Pseudocode~~ & Pseudocode:-

$i \leftarrow 1$ $t \leftarrow 1$

WHILE $i \leq 10$ DO, $t \leftarrow 1$

IF $i \bmod 3 \neq 0$ THEN

WHILE $t \leq 10$ THEN

OUTPUT $(i, "x", t, "=", i * t)$

$t \leftarrow t + 1$

END WHILE

FAST

END IF

ie i+1

END WHILE
