Date:

Checking Number (220)

Loop Variable	Condition:	Divisor Added?	Running Sum of Divisors
1	True (220/1 = 220)	Yes (+1)	1
2	True (220/2 = 110)	Yes (+2)	3
3	False	No	3
4	True (220/4 = 55)	Yes (+4)	7
5	True (220/5 = 44)	Yes (+5)	12
6 to 9	False	No	12
10	True (220/10 = 22)	Yes (+10)	22
11	True (220/11 = 20)	Yes (+11)	33
12 to 19	False	No	33
20	True (220/20 = 11)	Yes (+20)	53

Date:

21	False	No	53
22	True (220/22 = 10)	Yes (+22)	75
23 to 43	False	No	75
44	True (220/44 = 5)	Yes (+44)	119
45 to 54	False	No	119
55	True (220/55 = 4)	Yes (+55)	174
56 to 109	False	No	174
110	True (220/110 = 2)	Yes (+110)	284

Date:

Checking the Second Number (284)

Loop Variable	Condition:	Divisor Added?	Running Sum of Divisor
1	True	Yes (+1)	1
2	True	Yes (+2)	3
3	False	No	3
4	True	Yes (+4)	7
5 to 70	False	No	7
71	True	Yes (+71)	78
72 to 141	False	No	78
142	True	Yes (+142)	220

Final Decision:

Since the sum of the proper divisors of 220 equals 284, and the sum of the proper divisors of 284 equals 220, both conditions are satisfied. Furthermore, because the two numbers are different ($220 \neq 284$), (220, 284) is confirmed to be an amicable pair.
